

Three Earthquakes in the Baltimore Gneiss

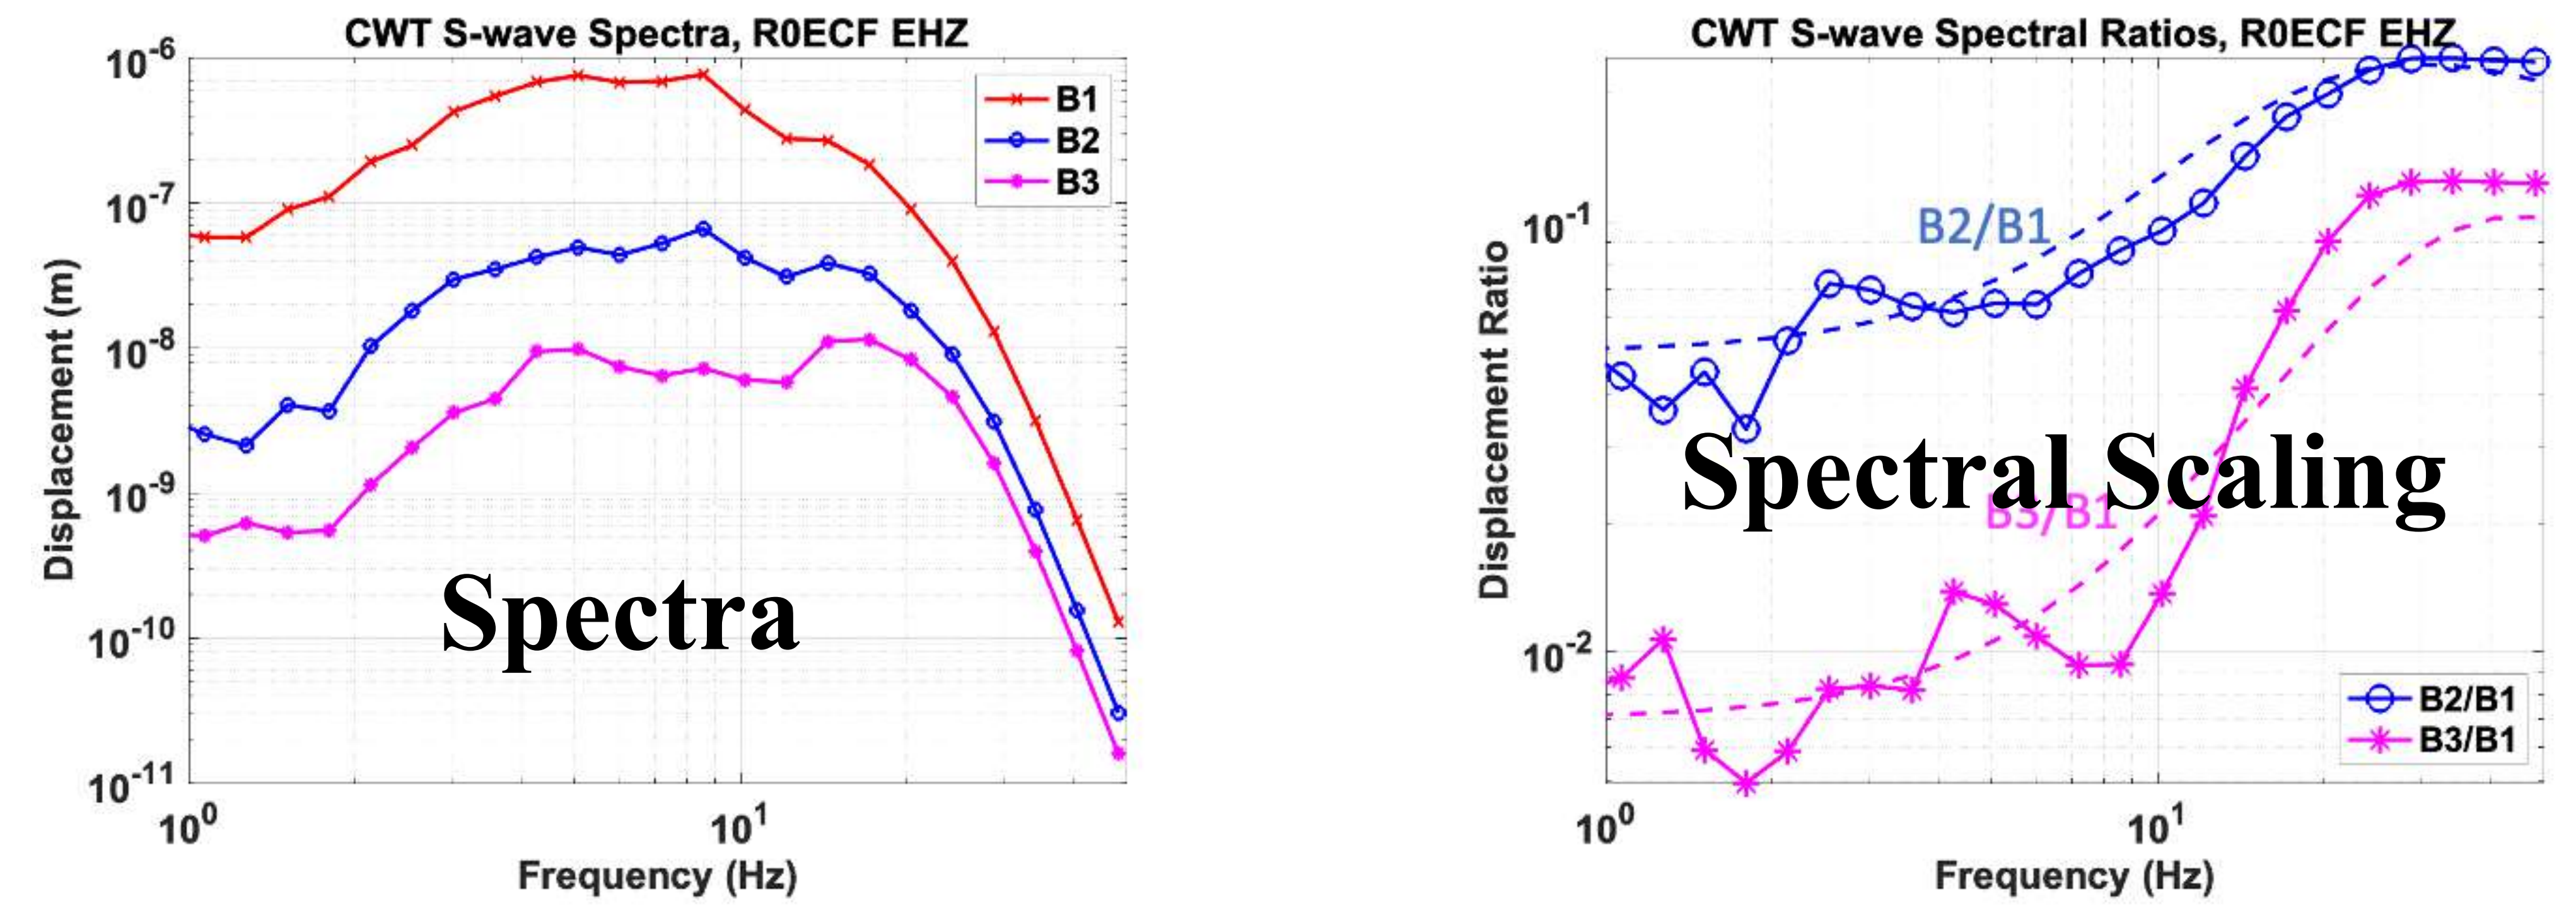

Keith L. McLaughlin, mclaughlin0kl@me.com, Alan Kafka, kafka@bc.edu

- 3 Events in Piedmont Metamorphics USGS Bulletin:
 - 20210625 19:40:45 2.5km M2.6
 - 20210627 05:53:33 5.0km M1.6
 - 20210815 05:06:04 4.8km M1.7
- Eight Raspberry Shakes < 50 km
Woodlawn, 0.5-5 Hz

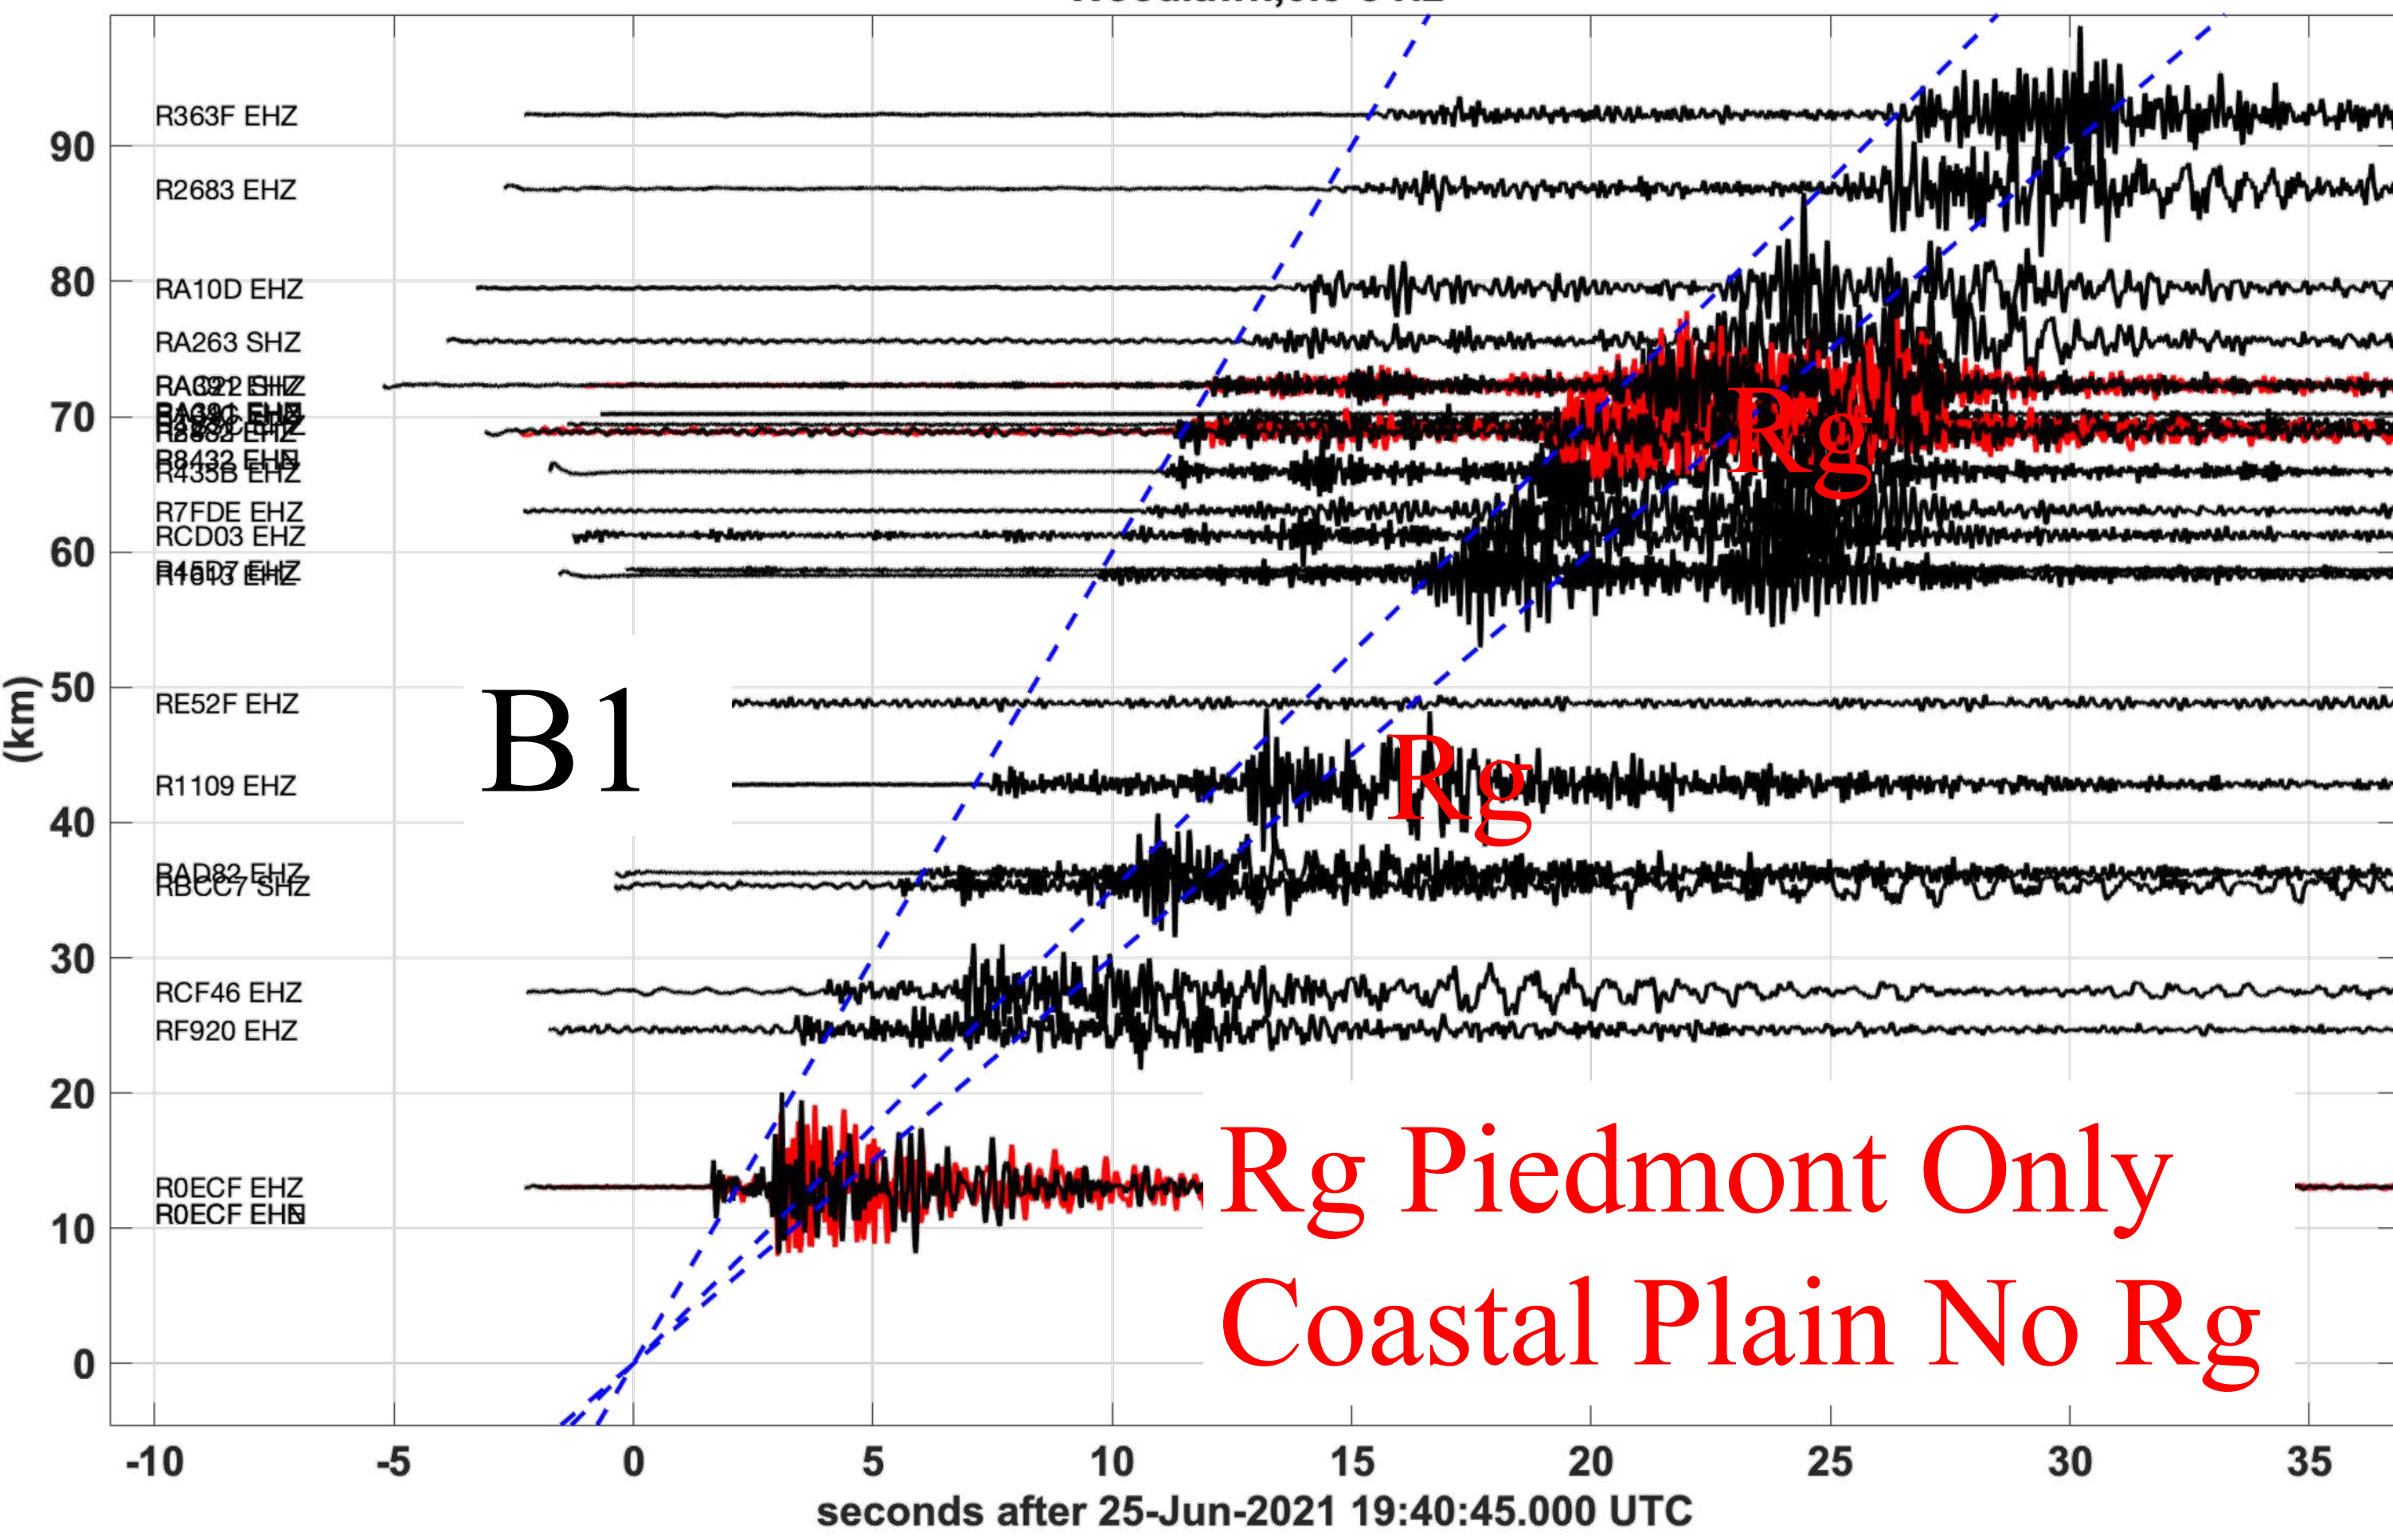

Source Scaling

Moments from Displacement Fourier Spectral Levels, 7 Raspberry Shakes, 9 components					
Event	Mw, S wave	Mw, P wave	Mw Relative	Log10(M) (Nm)	USGS MAG
B1	3.01 (9)	3.11 (9)	0.0	13.78	2.6
B2	2.29 (8)	2.43 (8)	2.38	12.78	1.6
B3	1.94 (5)	2.20 (5)	2.07	12.31	1.7

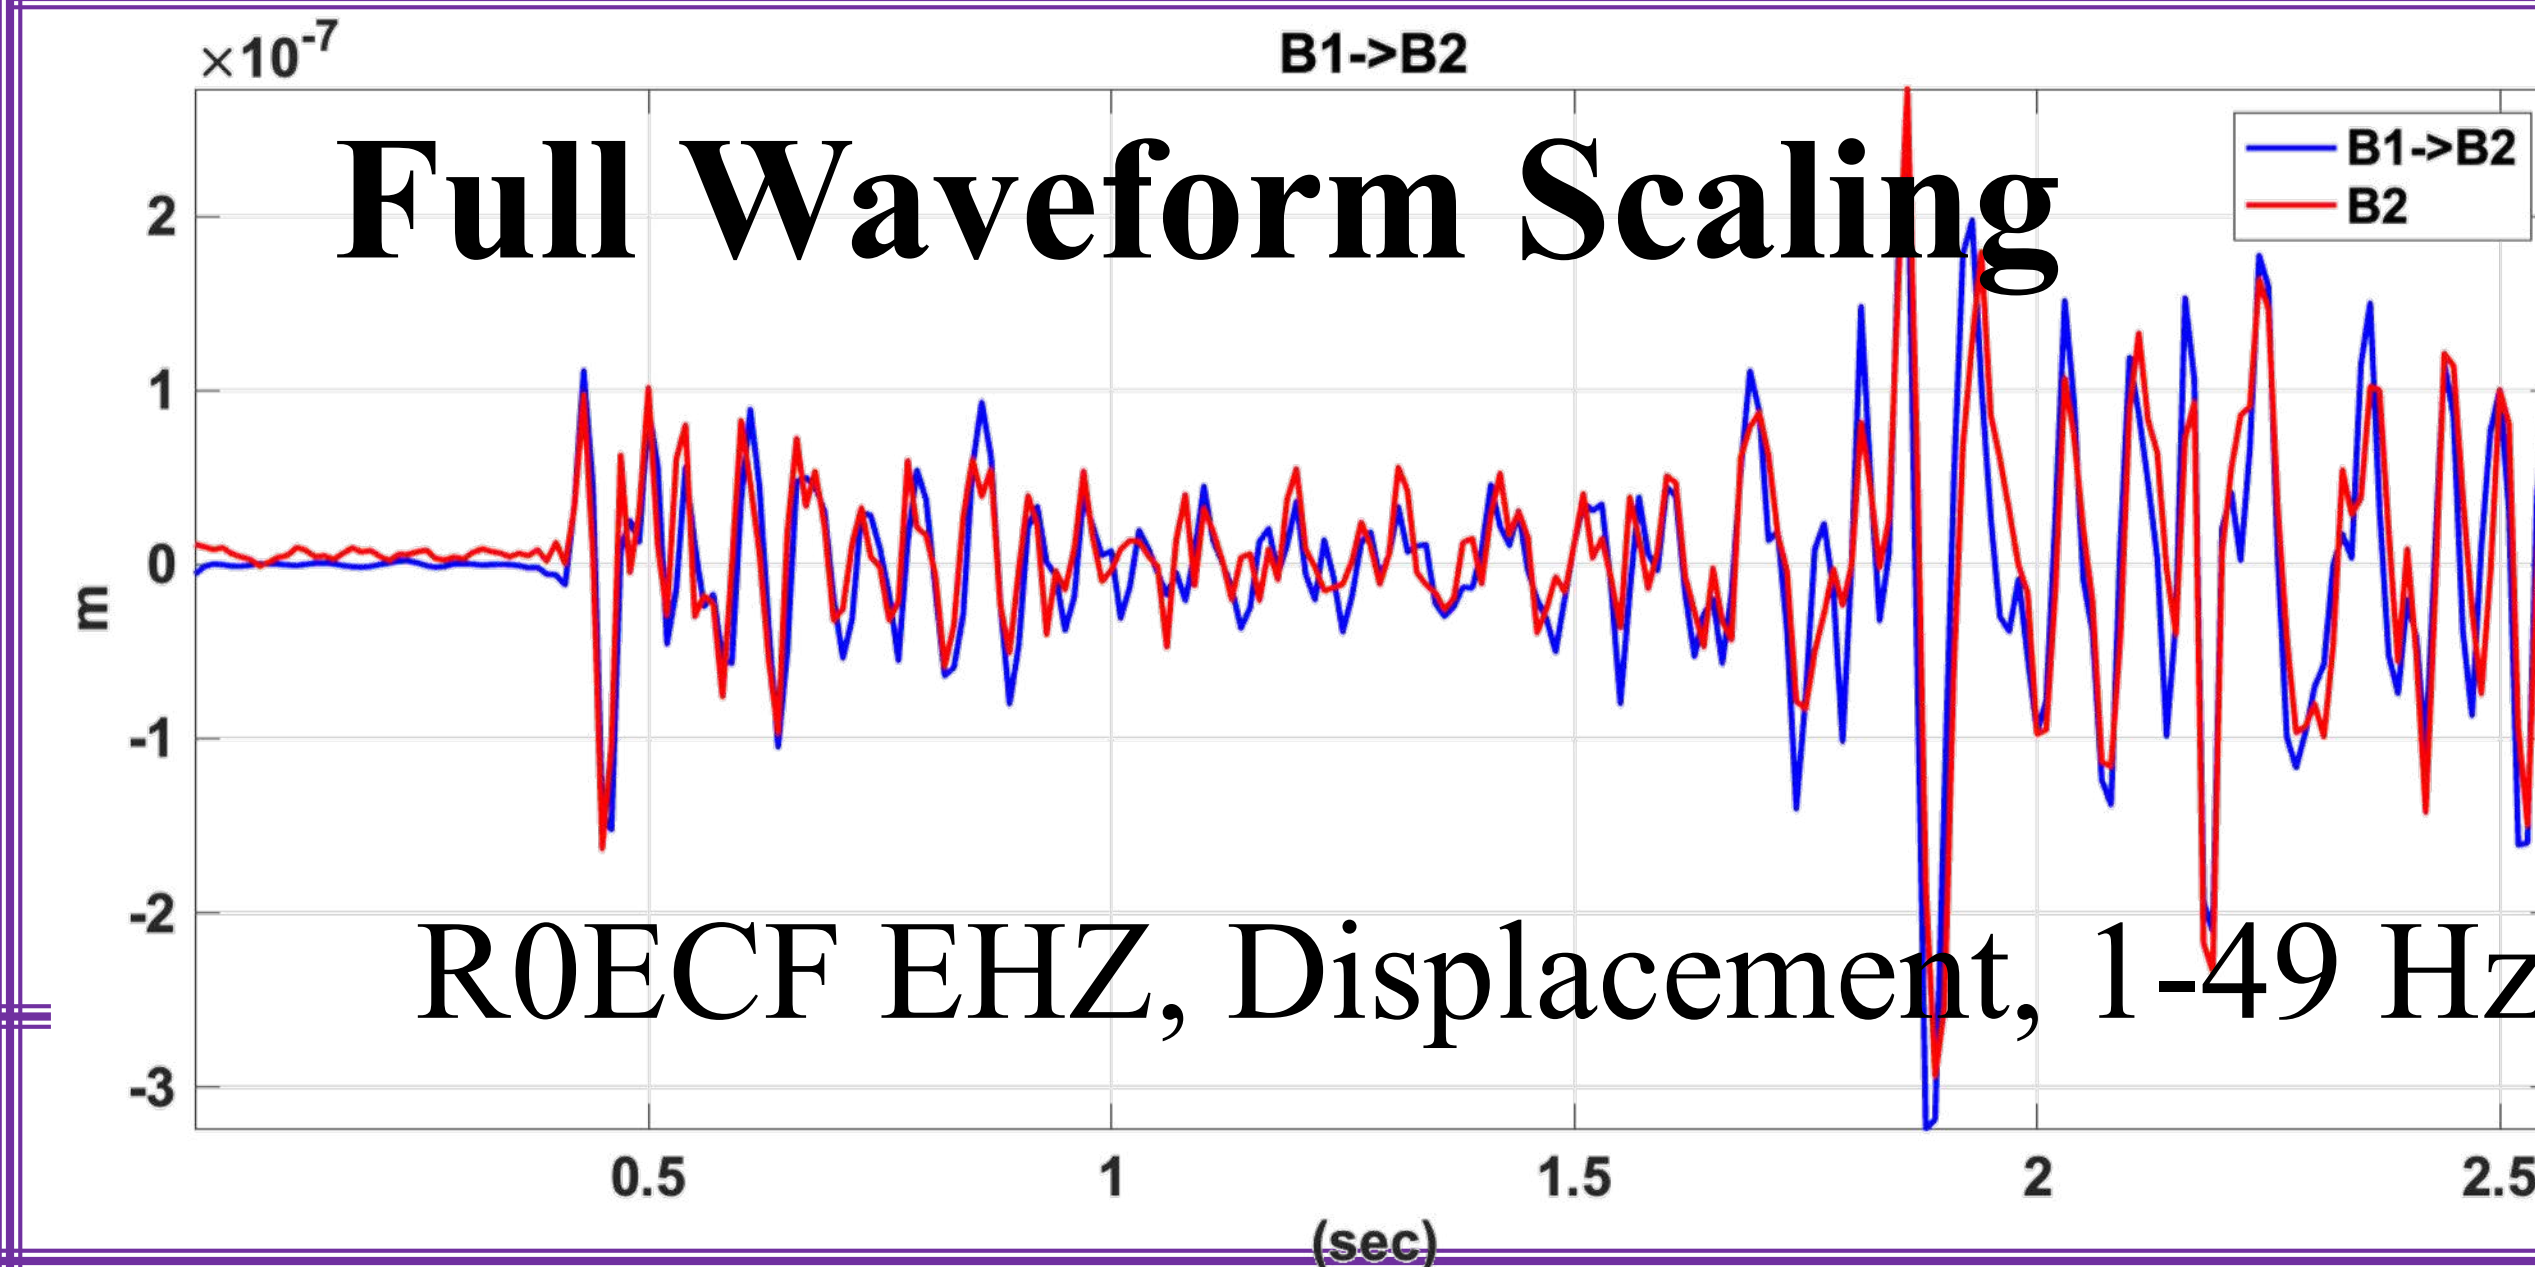

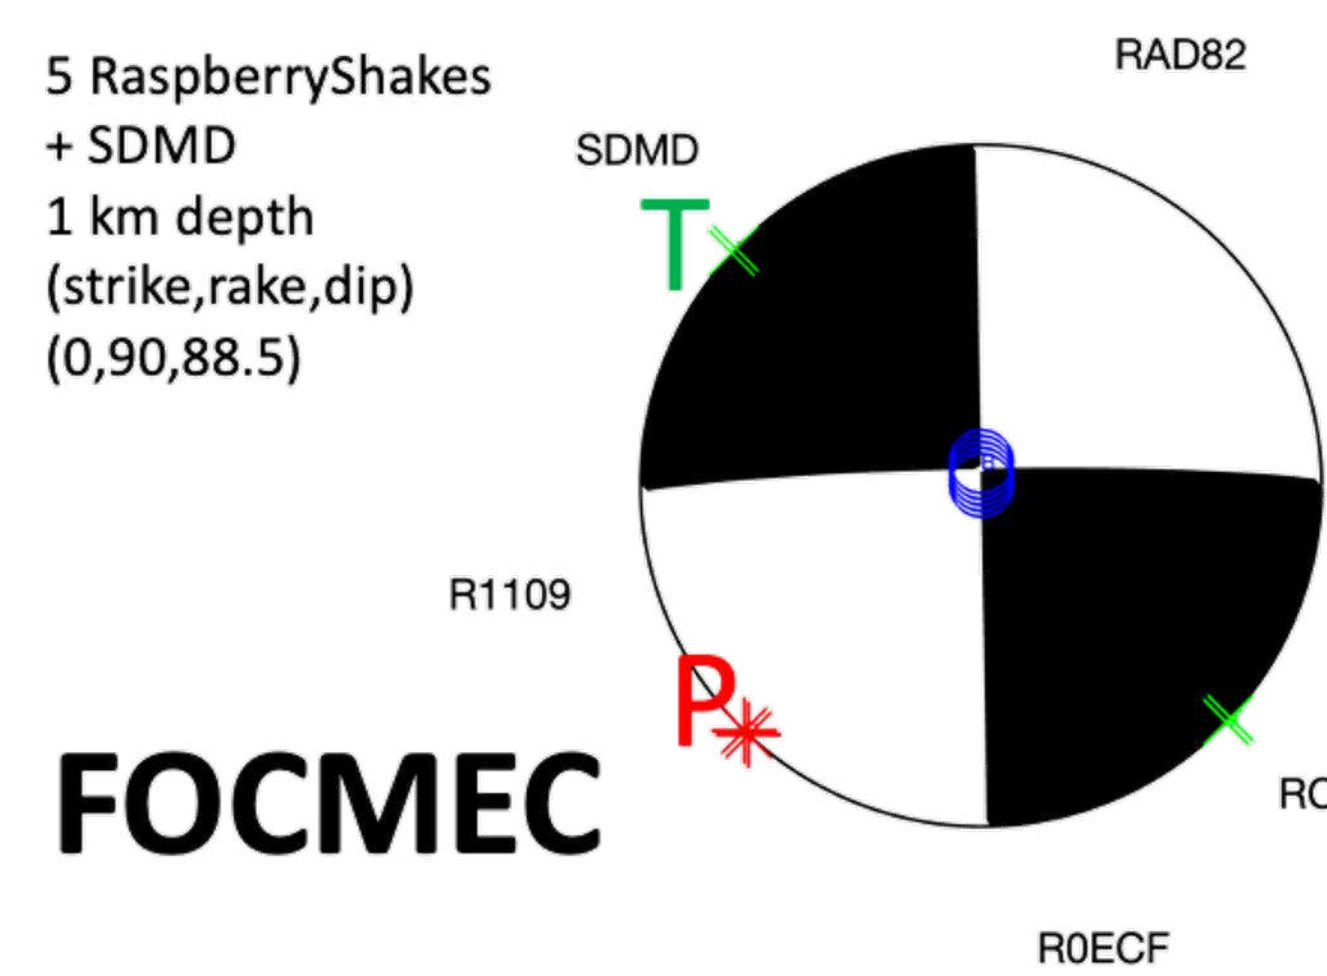

Source Parameters, R0ECF Spectral Scaling

Event	Mw	M (N-m)	Relative	Fc (Hz)	Radius (m)	Stress Drop (Pa)
B1	3.0	6.0e13	1.0	7	285	1.1e6
B2	2.4	3.0e12	0.05	19	105	1.1e6
B3	2.1	4.2e11	0.007	37	54	1.1e6

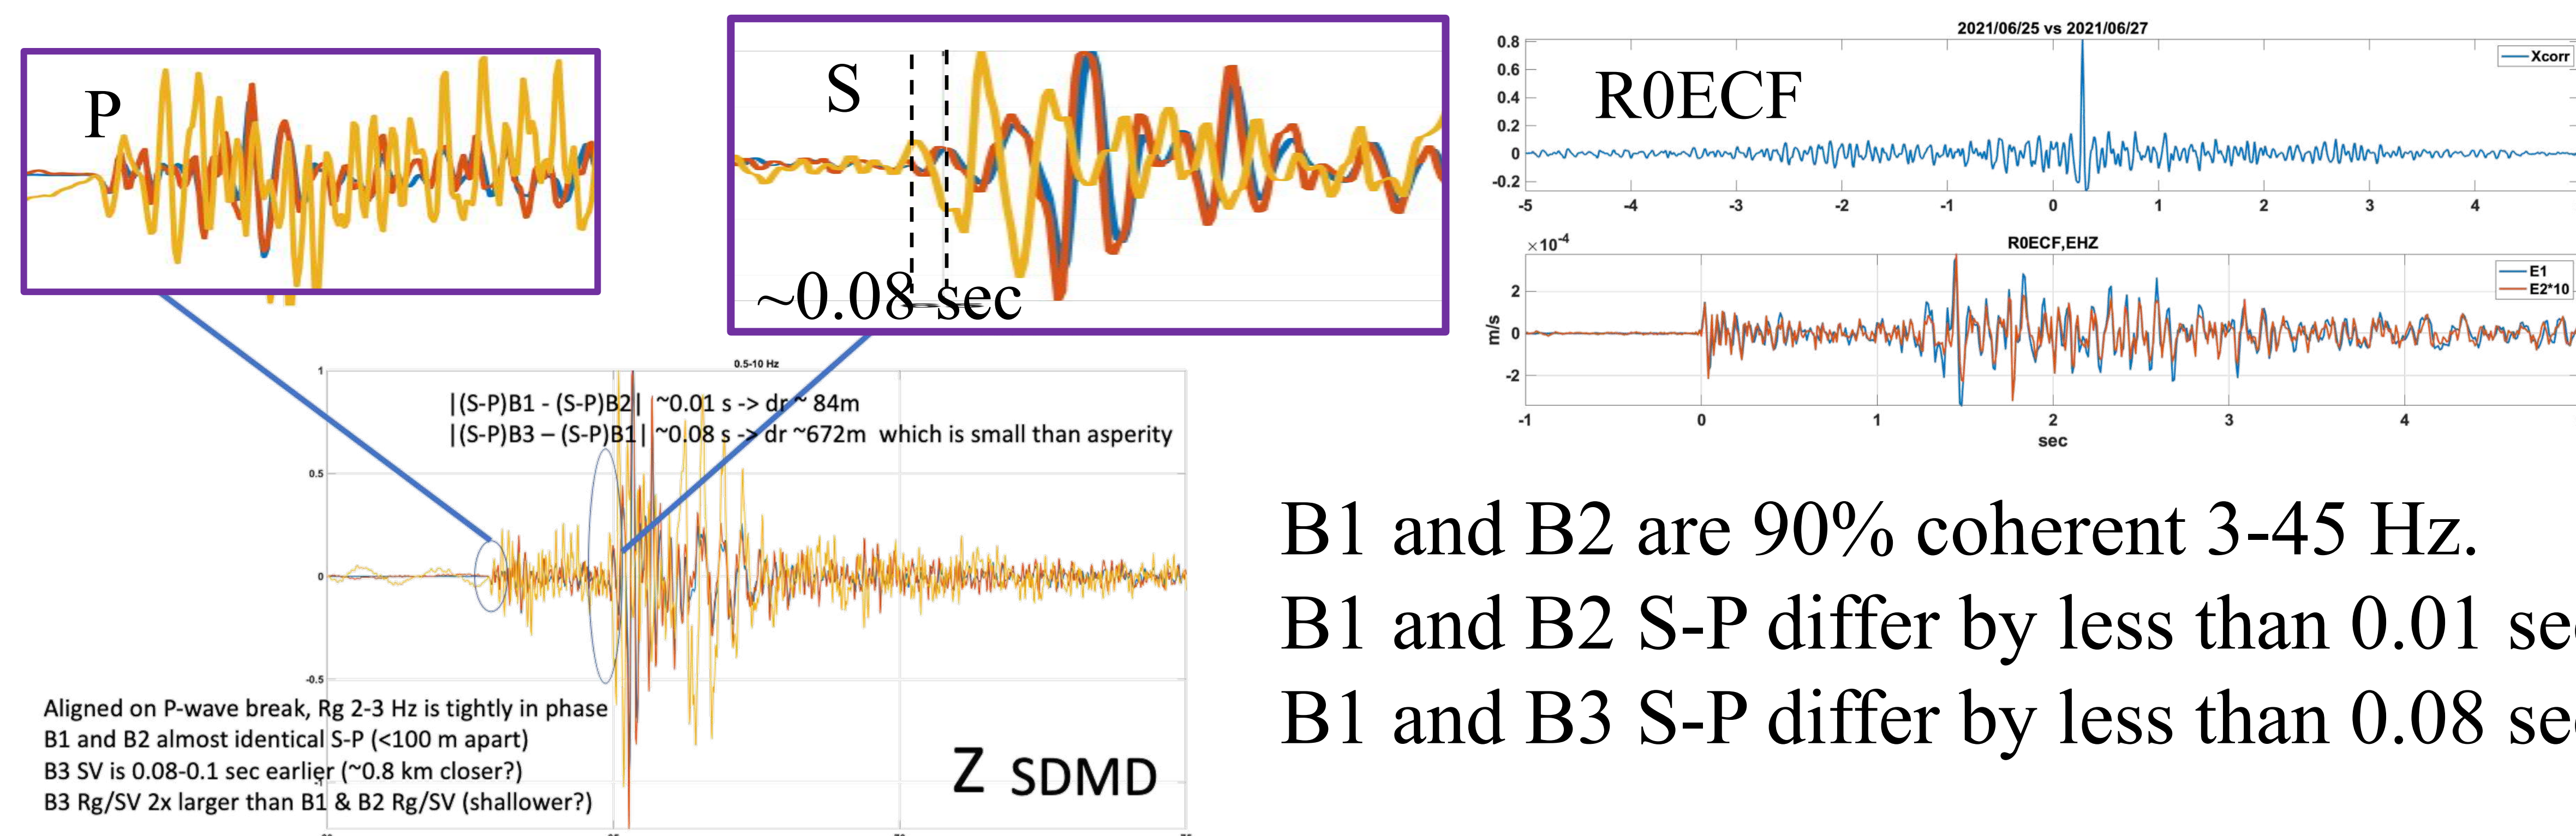

11 Raspberry Shakes P and S
OT 2021/06/25 19:40:44.707,
39.2925, -76.6839, +/- 0.5 km, H =
5.00 +/- 1.9 km, RMS 0.023 sec.
**ALL THREE EPICENTERS
WITHIN 1 KM**

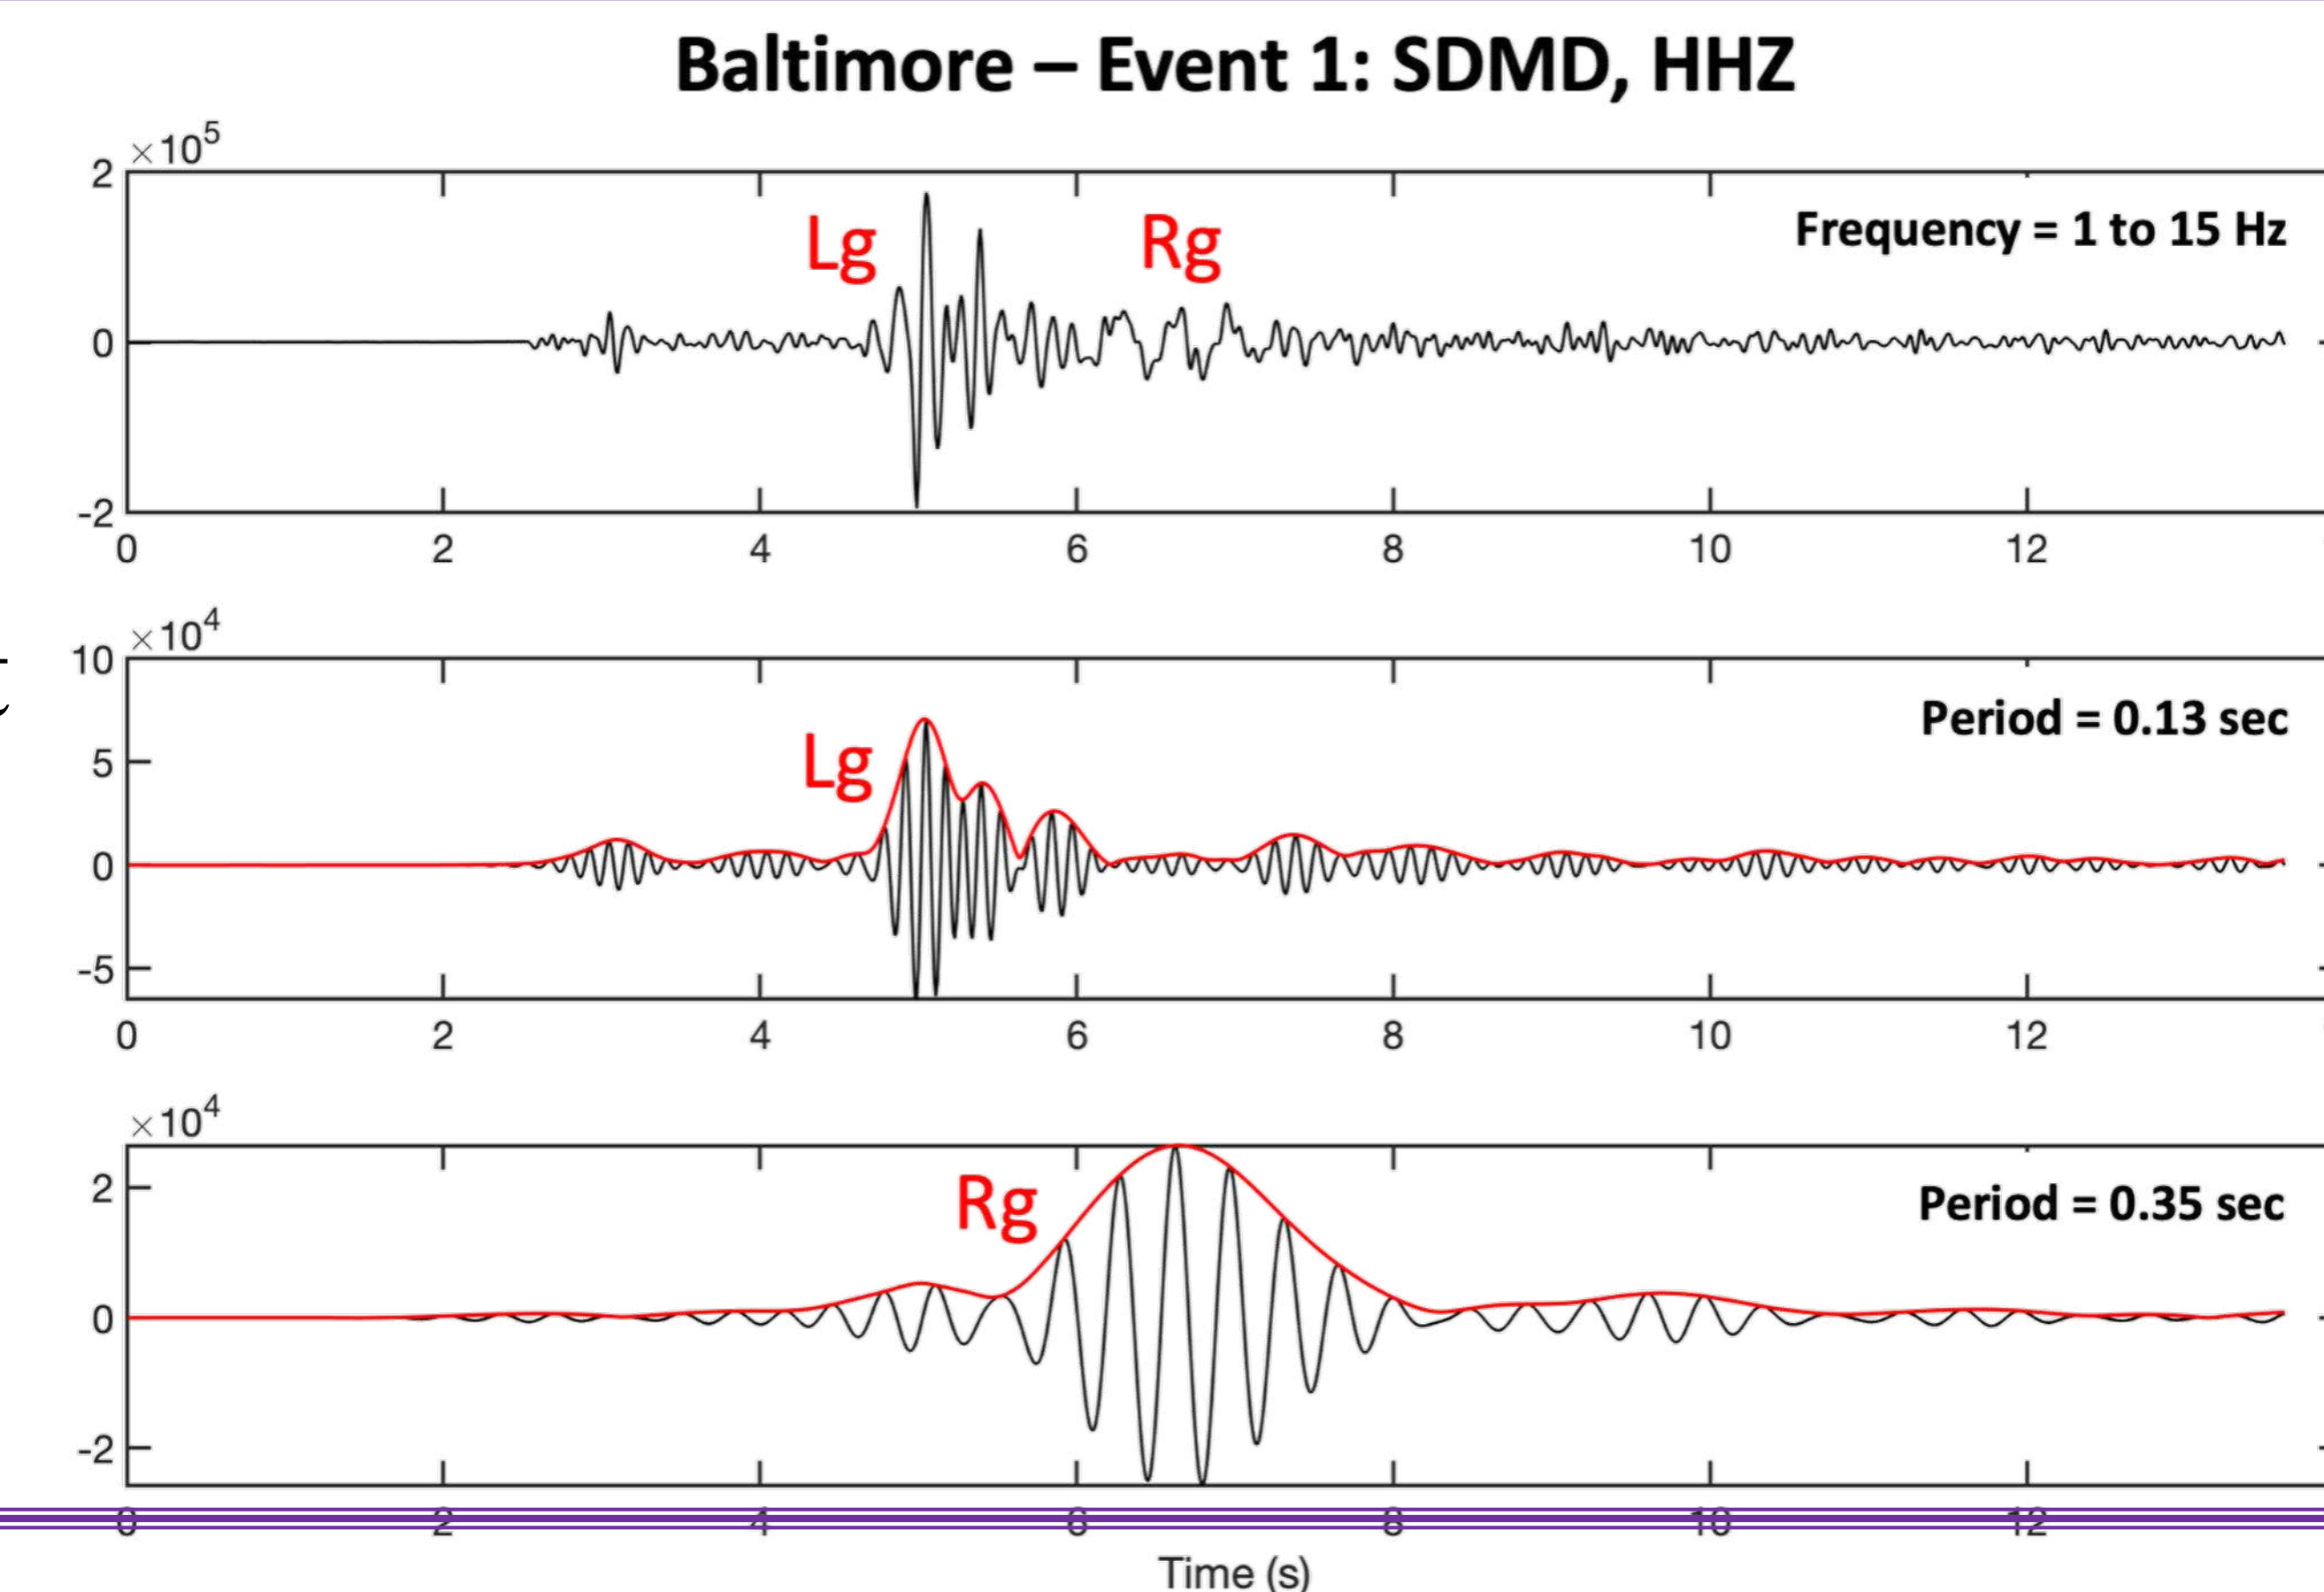

Transforming B1-> B2
recovers B2 with a max CC
= 0.86, 1-49Hz.
**The same asperity broke
with moment ratio of
M2/M1 = 0.05**

WAVEFORM COMPARISONS AT SDMD (19 km) AND R0EC (9.7 km)F:
B1-B2 SEPARATED BY < 100 m, B1-B3 SEPARATED BY < 700 m

Depth From Rg/Lg
Rg was observed on
multiple Piedmont Shakes
and SDMD in the Piedmont
above the fall line. Rg/Lg
ratio based on method of
Kafka (1990) favors a
shallow depth < 1 km.

Citizen Seismographs Contribute Valuable Data In Sparsely Monitored Suburban Area
